DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on March 29, 2001. It is noted, however, that applicant has not filed a certified copy of the 2001-095450 application as required by 35 U.S.C. 119(b).

Information Disclosure Statement

The examiner's consideration under MPEP 609 of the non-English language references cited on submitted Information Disclosure Statement is limited to the extent described for the cited non-English documents and any corresponding translations therein only so far as the particular portion respectively translated and without reference to a complete invention thereof. It is further noted that the translations are not attested as to their accuracy.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as anticipated by Takahashi et al. (U.S. Patent No. 6,126,545; hereafter "Takahashi").

Takahashi discloses the video game program causes the computer to execute a generating procedure that, when the direction key is operated by the player, corrects the input direction by an angle to generate a corrected direction as a progress direction of the character in a 3D space (Figs 7-9); a first character movement controlling procedure that move the character in the progress direction in the 3D space (Figure 6); storing procedure that stores the progress direction; a determining procedure that determines whether an identical direction is input from the direction key continuously (8:8-22); and a second character movement controlling procedure that, when if it is determined that the identical direction is input from the direction key continuously, moves the character in the stored progress direction in the 3D space regardless of movement of the line of sight (8:8-22). Further, Takahashi encounters landscapes (Fig. 6) through the always changing view points of C1-C3 (Figs 7-9), that the player using the controller (Fig 1, item 2b) would use the forward button (up direction of the directional button) to move forward with respect to any camera angle C1-C3 of Figs 7-9.

Claims 2-4 correspond in scope to a recording medium, a method of controlling movement and an apparatus set forth for use of the video program listed in the claim above and are encompassed by use as set forth in the rejection above.
